

Healix Bio Labs

Research Fellowship

Building the Future of Biomedical Intelligence

ORGANIZED BY:

Healix Technologies Pvt. Ltd.
Biomedical Intelligence Network

COHORT DETAILS:

Academic Cycle 2026 - 2027
Applications Open Quarterly

[OFFICIAL CURRICULUM & ADMISSION BROCHURE](#)

Build Research That Matters

Welcome to the Healix Bio Labs Research Fellowship Program. This prestigious cohort-based module is designed to bridge the gap between textbook education and actual, hands-on scientific breakthroughs. Under the guidance of leading PhD supervisors and senior advisors, fellows participate in active clinical trials, deploy computational genomics pipelines, build neural interfaces, and co-author manuscripts targeted at indexed journals.

The Four Core Pillars

1. Research Mentorship

Fellows are matched directly with active senior PhD advisors from leading institutions to guide study designs, citation reviews, and statistical validations.

2. Active Clinical Projects

Contribute directly to actual clinical datasets and computational biology pipelines, gaining exposure to real-world challenges and biological outcomes.

3. Publication Support

Comprehensive assistance with manuscript drafts, figures generation, citation bibliography management, and responding to editorial reviews.

4. Professional Network

Build lifetime associations with co-authors, peers, and senior scientists across prestigious biotech networks and research labs.

Academic Streams & Tracks

Our fellowship spans six key domains of modern healthcare and biomedical intelligence. Candidates choose one primary stream to focus on.

Biotechnology & Genomics

Focus on mRNA delivery vectors, CRISPR-Cas9 sequence editors, and wet-lab diagnostics workflows designed for targeted oncology treatments.

Neuroscience & Interfaces

Investigate neural interface scripts, computational brain models, neurodegenerative diagnostics, and EEG datasets sequence processing.

AI & Machine Learning

Build and train neural network diagnostics models, retinopathy detectors, healthcare natural language tools, and clinical statistics pipelines.

Clinical Trials & Research

Study clinical trial protocols, data collection tools, cohort statistics, study design, and FDA/clinical validation methodologies.

Drug Discovery & Design

Analyze molecular docking simulators, enzyme inhibition assays, protein folding algorithms, and virtual screening compound datasets.

Public Health & Genomics

Study disease transmission kinetics, epidemiological studies, population genomics data, and policy-oriented biological dashboards.

Curriculum & Timeline

A structured 5-month cohort schedule guiding fellows from scientific methodology basics to full publication.

MONTH 01	Research Foundations & Literature Reviews • Learn search indexing strategies across PubMed, Scopus, and Web of Science. • Draft systematic reviews, research hypotheses, and study designs. • Establish ANOVA frameworks, bio-statistics tools, and p-value validation layouts.
MONTH 02	Mentor Matching & Specific Aims Prep • Match with assigned PhD advisors and prospective clinical research guides. • Write specific aims proposals, literature scopes, and topics validation outlines. • Configure computational frameworks, local development nodes, and servers.
MONTH 03	Project Implementation & Execution • Execute computational biology runs or clinical trials sequence evaluations. • Clean data outputs, compile trial results, and run validation algorithms. • Prepare primary figures, datasets charts, and present update report to the board.
MONTH 04	Manuscript Writing & References Configuration • Write manuscript sections: Abstract, Intro, Methods, Results, and Discussion. • Setup bibliography managers (Mendeley, Zotero) and select target journals. • Complete internal reviews with advisors and resolve draft edit corrections.
MONTH 05	Journal Submission & Public Presentation • Submit finalized manuscript draft to target peer-reviewed indexed journals. • Deliver public cohort presentation during graduation ceremony. • Receive Bio Labs Research Fellowship Certification and advisor letters of recommendation.

Elite Mentorship Board

Learn directly from active PhD supervisors leading institutional clinical streams.

Dr. Priya Sharma, PhD

AIIMS New Delhi • mRNA Delivery Vectors

Researching non-viral lipid nanoparticles for vaccine delivery vectors.

Dr. Avnish Verma, PhD

IIT Bombay • Computational Genomics

Focusing on DNA sequence analysis and machine learning genome annotations.

Dr. Rajesh Mehta, PhD

IISc Bangalore • Neural Interfaces

Investigating prosthetic controller scripts and brain-computer interfaces.

Dr. Sunita Rao, PhD

IIT Delhi • AI Drug Discovery

Applying graph neural networks to screen molecular docking interactions.

Admissions & Requirements

The Bio Labs Research Fellowship is a highly selective program. Applications are screened quarterly by our academic board. Selectees receive comprehensive funding, computational resources, and direct supervisor access.

Application Steps:

1. Online Application: Submit transcripts, research stream choices, and CV at healix-technologies.com/fellowships.
2. Statement of Purpose (SOP): Explain your research targets and why you align with Healix BioLabs.
3. Technical Interview: Peer alignment interview with assigned stream leads and prospective advisors.

Admissions Cycle Schedule:

- Applications Screening Phase: Active and open quarterly.
- Screening Process: 14 business days from date of submission.
- Cohort Start: January, April, July, and October quarterly cycles.
